Front End developer

Alejandro Chaves

Senior Frontend Developer @ S4N | React.js, TypeScript, Node.js
Medellín, Antioquia, Colombia

Extracto

As a Senior Frontend Developer at S4N, an EPAM Company, I focus on building internal notification systems for Hulu using React, TypeScript, and GraphQL. My work emphasizes best practices and seamless integration between frontend and backend systems to deliver effective solutions.

My academic background includes studies in Systems Engineering at the National University of Colombia. I specialize in frontend development with expertise in React.js, TypeScript, and Next.js, and have contributed to diverse projects ranging from logistics systems to AI-integrated web applications.

Experiencia

S4N, an EPAM Company
Senior Frontend Developer
octubre de 2023 - Present (2 años 7 meses)
Medellín, Antioquia, Colombia

Disney (Hulu)

Develop internal notification systems that are going to be used through internal tools for Hulu, following the best practices on react, typescript, worked on creating GraphQL communication and integrating it between the frontend and backend

Thomson Reuters:

Developing and maintaining web applications using the latest technologies, including React with TypeScript on the frontend and AI integration with OpenAI on the backend using Node.js.

Key Responsibilities:

- Design and implement responsive and dynamic user interfaces using React and TypeScript.

- Develop and maintain server-side logic with Node.js, incorporating AI functionalities with OpenAI.
- Collaborate with clients to define project requirements, deliverables, and timelines.
- Ensure code quality and maintainability through comprehensive testing and documentation.
- Integrate and manage SQL and NoSQL databases for efficient data storage and retrieval.

Skills:

- React.js
- TypeScript
- Node.js
- OpenAI

Miter

Senior Founding Engineer

mayo de 2022 - enero de 2023 (9 meses)

Worked on an user facing meeting assistant product as a Senior Founding Engineer.

Tasks and commitments:

- Design and implementation of big user facing features such as a dynamic widget for running activities in meetings such as brainstorming and voting.
- Full-stack software development focused on front-end side.
- UX and prototype adjustment after business analysis.
- Development of features and improvements, unit tests, adding code and formal documentation.
- API endpoints integration with nodeJS.
- PostgreSQL db design and integration with API endpoints.
- Real time operations with socket.io, integrated with the endpoints and the app.

Hourly

Sr. Frontend developer

mayo de 2021 - abril de 2022 (1 año)

Medellín, Antioquia, Colombia

Worked as a front end developer building features ranging from components for an UI design system to complex screens relying on data that required a big implementation of redux, while optimizing where possible and migrating

legacy code to new standards for a B2B product with a big focus on payroll and insurances.

Tasks and commitments:

- Implementation of designs for custom components on the current design system, using the most maintainable technologies.
- Frontend oriented web development with a pixel perfect focus while implementing the requested features.
- Development of features and improvements, unit tests, adding code and formal documentation.
- Legacy migration from class components to functional components.
- A big focus on redux.

Gorilla Logic

Senior Frontend Developer

abril de 2020 - junio de 2021 (1 año 3 meses)

Medellín, Antioquia, Colombia

Globant

Ssr. Web UI developer

junio de 2019 - mayo de 2020 (1 año)

Medellin, Antioquia, Colombia

Worked on 3 projects with Disney.

Disney parks:

Worked with polymer building web components for parks ticket buying systems.

Disney Studios (Motion picture productions):

- Worked on an internal app based on React on the front end and Node on the back end.
- Worked on multiple projects based on Angular 9, collaborating from the visual design to the architecture both on the front end side with Angular 9 and NgRx, and on the back end with Node.

Knowbly Learning Systems

Jr. full-stack Developer

marzo de 2018 - junio de 2019 (1 año 4 meses)

San Rafael, California, United States

Worked on the frontend and backend of a LMS (Learning management system) mostly a B2B product.

- A big focus on the frontend side building components on Vue.js.
- Built real-time features with socket.io such as real-time notifications to the user.
- Occasionally worked on modifying existing endpoints built in node.
- A big focus on pixel-perfect implementation of the designs, working hand to hand with the designer.

BASE16 SAS

Front-End developer

marzo de 2017 - marzo de 2018 (1 año 1 mes)

Medellin, Antioquia

Front end role with later full stack focus building MEAN responsive web applications.

- Built and designed from scratch a clothes wizard which allowed customers to select the best fit for their children according to some variables.
- Collaborated on an e-commerce platform for a fruits company
- Built and designed from scratch a document hybrid application

Educación

National University of Colombia

Bachelor's Degree, Systems Engineering · (2016 - 2018)
